REMOTE TEMPERATURE SENSOR
FGD-0100
V.1.53

The Remote Temperature Sensor enables your Sensaphone to measure the temperature at a location away from the unit. This sensor is intended for installation in a clean, dry environment. The Remote Temperature Sensor can be used with the models listed below.

Sensaphone Models: 400, 800, 1400, 1800, WEB600, Sentinel, Sentinel Pro, Sentry and Stratus EMS.

The sensor may be connected to any available input terminal. Refer to your user's manual for configuration and programming.
To connect the sensor:

1. Remove any existing wiring or sensors (including local thermistor) from the input terminal.
2. Attach two-conductor wire to the input terminal and ground.
3. Connect the wires to the two screw terminals on the remote temperature sensor.
4. Put the enclosure cover in place and install the sensor housing securely using the two mounting screws furnished.
5. See your Sensaphone user manual for programming instructions.
